QUALITY SINCE 1905

MADE IN GERMANY

# Cordless hand blender vertico⁷ Plus

## selected design

**Details**

- cordless, battery-operated hand blender
- full metal construction
- LED battery level indicator
- three speed settings
- two-finger switch-on safety system
- automatic safety shut-off in case of overloading or overheating
- four attachments made of stainless steel:
  - universal cutter: used to blend most foods
  - cutting blade: suited for the cutting of meat and fibrous fruits and vegetables
  - whipping disk: used to whip creamy or fluffy foods
  - stirring disk: suited to stir foods with a thick, creamy consistency
- blending cup made of stainless steel, blending cup made of plastic
- warranty: 2 years*
- product made in Germany

QUALITY SINCE 1905

# Cordless hand blender vertico⁷ Plus

## the cordless one

Conventional hand blenders are equipped with cords that often turn out to be too short. This leaves you with no choice but to take the hot pot with its boiling contents towards the power outlet. If the cable is long enough you must be careful not to knock over any objects standing in the way. You must also make sure not to place the cable over hot surfaces.

The new vertico⁷ Plus hand blender guarantees absolute freedom in the kitchen with its cordless design. The lithium ion battery's operating time depends on the respective kind of food that needs to be cut. It lasts about 20 minutes while puréeing liquid or creamy foods like soups and about 15 minutes while chopping raw vegetables or while preparing doughs. The hand blender is kept in its own charging station – that way, it is always ready to hand and is recharged automatically after every use as soon as it is put away.

ritterwerk has equipped their hand blender with a lithium ion battery that is gently and slowly charged without being overcharged thanks to its intelligent charging technology. This charging technology ensures a longer battery life. Should the battery ever become defective, it would not be necessary to throw away the entire blender. For the sake of sustainability, we have integrated a replaceable battery, so that customers can order a new battery and install it themselves.

The mixer unit has an open shape to prevent clogging when chopping hard foods. The simple operation of the vertico⁷ Plus hand blender with the tried-and-tested two-finger safety switch-on technology prevents accidental switch-on and guarantees safety. The hand blender can only be activated by pressing both buttons and becomes inactive if one of the buttons is released. The overload protection feature protects the motor and automatically switches the device off in case of overheating or blocking of the blade. In addition, the hand blender can work at three different speed settings.

Thanks to the four different stainless steel attachments that are included with delivery for the vertico⁷ Plus, the new hand blender has a wide range of preparation options, including chopping, foaming, puréeing and stirring. The attachments are suitable for dishwashers, but this may cause the blades to become blunt. Optimal processing is achieved in the blending cups because they are ideally suitable with their tall, narrow shape. The scope of delivery for the vertico⁷ Plus includes all of the above mentioned stainless steel attachments as well as one blending cup made of plastic and one made of stainless steel.
